

FILE 1 – BASIC JAVA EXERCISES

Basic Java Programming – Exercises

Exercise 1 – Swap Variables Write a Java program to swap two integer variables a and b without using a third variable. Demonstrate the program with a = 5 and b = 10.

Exercise 2 – For Loop Write a Java program that prints the first 10 positive integers and their squares using a for loop. Output format:

Mã

1 -> 1

2 -> 4

...

10 -> 100

Exercise 3 – Even Numbers Write a Java program that prints all even numbers from 1 to 20. For each even number, print the message: This is an even number.

Exercise 4 – Array Average Declare and initialize an array of five integers. Write a Java program to calculate and print the average of the array elements.

Exercise 5 – Array Sum Given the array:

java

```
int[] numbers = {1,2,3,4,5,6,7,8,9,10};
```

Write a Java program to calculate the sum of all elements using a for loop.

Exercise 6 – Skip Value Modify Exercise 5 to skip the number 5 during summation.
