

FILE 2 – JAVA OPERATORS EXERCISES

Chapter: Operators – Exercises

Exercise 1 Write Java expressions using the operators +, -, *, /, %. Provide example values and expected results.

Exercise 2 Explain how the modulus operator % works with:

- Negative numbers
- Floating-point numbers

Provide examples.

Exercise 3 Java does not support an exponent operator. Write a Java program to calculate x raised to the power y.

Exercise 4 Explain type casting in Java. Provide examples of:

- Implicit casting
- Explicit casting

Exercise 5 Write a Java program demonstrating compound assignment operators: +=, -=, *=, /=, %=.

Exercise 6 Write a Java program to demonstrate the difference between:

- Prefix increment/decrement
- Postfix increment/decrement
