

Chapter 5 - Flow Control Exercises

1. Write a Java program using if-then to check if a number is positive. Print 'Positive' if true.
2. Write a Java program using if-then-else to check if a student passed (score ≥ 50). Print 'Pass' or 'Fail'.
3. Write a Java program using nested-if to assign grades based on the following:
 - A: 80-100
 - B: 65-79
 - C: 50-64
 - F: 0-49
4. Rewrite the grading program using sequential-if. Compare its efficiency with nested-if.
5. Write a Java program using switch-case to print the name of a day given its number (1 to 7).
6. Write a Java program using switch-case to perform arithmetic operations (+, -, *, /) based on user input.
7. Write a Java program using the conditional operator (?:) to find the maximum of two numbers.
8. Write a Java program to check if a number is even or odd using the conditional operator.
9. Write a Java program that asks the user to input a score and prints the performance category:
 - Good: [9-10]
 - Fair: [7-9)
 - Average: [5-7)
 - Weak: [0-5)
 - Otherwise: 'Invalid score'
10. Create a simple English-Vietnamese dictionary using switch-case. Let the user input an English word and print its Vietnamese meaning.
