

## Loops and Arrays - Exercises

1. Write a program that inputs an array of integers and calculates the sum of the elements.
2. Write a program that inputs an array of integers and finds the largest value.
3. Write a program that inputs an array of integers and a number x, then counts how many times x appears in the array.
4. Write a program that inputs an array of integers and finds the first positive element. If none, print 'None'.
5. Write a program that inputs an array of integers and reverses the array in-place (without using a second array).
